                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        seq length: 0 seq length: 2000000000

triacylglycerol lipase (EC 3.1.1.3) - bovine (fragment)
N;Alternate names: hormone-sensitive lipase
C;Specles: Bos primigenius taurus (cattle)
C;Date: 30-Sep-1989 #sequence_revision 30-Sep-1989 #text_change 30-Sep-1993
C;Accession: $00347
R;Garton, A.J.; Campbell, D.G.; Cohen, P.; Yeaman, S.J.
FEBS Lett. 229, 68-72, 1988
A;Title: Primary structure of the site on bovine hormone-sensitive lipase phosphorylated A;Reference number: $00347; MUID:88152238; PMID:3345839
A;Accession: $00347
A;Molecule type: protein
A;Residues: 1-27 GAR>
C;Comment: Activation of this enzyme involves phosphorylation of Ser-8 by cyclic AMP-dep C;Superfamily: hormone-sensitive lipase
C;Superfamily: hormone-sensitive lipase
F;8/Binding site: phosphate (Ser) (covalent) #status experimental
F;10/Binding site: phosphate (Ser) (covalent) #status predicted
                                                                                                                                                class I histocompatibility antigen H-2K(d) alpha chain, alternate splice form C; Species: Mus musculus (house mouse)
C; Date: 04-Nov-1994 #sequence_revision 04-Nov-1994 #text_change 07-May-1999
C; Accession: A60897

cytochrome P450 HLp3 - human (fragment)
N;Contains: oxidoreductase (EC 1.-.-)
C;Species: Homo sapiens (man)
C;Date: 17-Apr-193 #sequence_revision 17-Apr-1993 #text_change 17-Mar-1999
C;Date: 17-Apr-193 #sequence_revision 17-Apr-1993 #text_change 17-Mar-1999
C;Accession: A60558
R;Wrighton, S.A.; Ring, B.J.; Watkins, P.B.; Vandenbranden, M.
Mol. Pharmacol. 36, 97-105, 1989
A;Title: Identification of a polymorphically expressed member of the human cytochrome P-A;Reference number: A60558; MUID:89313723; PMID:2747634
A;Accession: A60558
A;Molecule type: protein
A;Residues: 1-29 <WRID
C;Comment: This protein strongly resembles, but is distinct from, cytochrome P450 CyP3A5
C;Superfamily: human cytochrome P450 CyP3A5; cytochrome P450 homology
C;Keywords: electron transfer; endoplasmic reticulum; heme; monooxygenase; oxidoreductas
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    A43768
Hu-like protein HB1 - Bifidobacterium longum (fragment)
C;Species: Blfidobacterium longum
C;Date: 01-Dec-1992 #sequence_revision 01-Dec-1992 #text_change 16-Feb-1997
C;Accession: A43768

                                                                                                                                                                                                                                                                                              InterPro; IPR000194; ATPase_a/bcentre.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      SÜBÛNIT: F-TYPE ATPASES HAVE 2 COMPONENTS, CF(1) - THE CATALYTIC CORE - AND CF(0) - THE MEMBRANE PROTON CHANNEL. CF(1) HAS FIVE SUBUNITS: ALPHA(3), BETA(3), GAMMA(1), DELTA(1), EPSILON(1). CF(0) HAS THREE MAIN SUBUNITS: A, B AND C.
SUBCELLULAR LOCATION: Chloroplast thylakoid membrane.
SIMILARITY: Belongs to the ATPase alpha/beta chains family.
                                                                                                                                                                                                                                                                                                                                                                                                                                                      s SWISS-PROT entry is copyright. It is produced through a collaboration ween the Swiss Institute of Bioinformatics and the EMBL outstation - European Bioinformatics Institute. -!- CATALYTIC ACTIVITY: 2 superoxide + 2 H(+) = O(2) + H(2)O(2).
-!- COFACTOR: Iron.
-!- SUBUNIT: Homodimer (By similarity).
-!- SUBCELLULAR LOCATION: Periplasmic.
                                                                                                                                                                                                                                                                                                                                                                                   SEQUENCE

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          IDENTIFICATION
POLYMORPHISM: Many isoforms of the allergen exist due to polymorphism. They can be classified as isoforms of type A (showners) and isoforms of type B. A microheterogeneity is detected a positions 4 and 11 of isoforms of type B.

MISCELLANEOUS: Allergen from olive pollen. Important in
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           13 LSSEALMRRA

J. Mol. Biol. 214:407-422(1990).
1- FUNCTION: IMPLICATED IN MITGCHONDRIAL PROTEIN IMPORT AND
MACROMOLECULAR ASSEMBLY. MAY FACILITATE THE CORRECT FOLDING OF
IMPORTED PROTEINS. MAY ALSO PREVENT MISFOLDING AND PROMOTE THE
REFOLDING AND PROPER ASSEMBLY OF UNFOLDED POLYPEPTIDES GENERATED
Ceratitis capitata (Mediterranean fruit fly).
